ABSTRACT OF THE DISCLOSURE

The invention relates to a viewing device, having a housing (2; 26) which has a front wall (3; 3'; 21; 29) with at least one viewing opening (8; 8'; 23; 28) for an object on view (10; 16; 24) that can be disposed or displayed inside the housing (2; 26) on the inner face (9; 9'; 34; 51) of the back wall (4; 4'; 22; 32, 33), and to a blank (25) for producing such a viewing device. In order for the two-dimensional object on views (10; 16; 24) displayed in such a viewing device (1; 1'; 20; 27) to give a three-dimensional impression, the invention proposes embodying the outer face (100) of the front wall (3; 3'; 21; 29) of the housing (2; 26) of the viewing device (1; 1'; 20; 27) as curved toward the observer (7). The three-dimensional impression of the object on view (10; 16; 24) to be displayed can be still further enhanced if in addition the back wall (4; 4'; 22; 32, 33) of the housing (2; 26) of the viewing device (1; 1'; 20; 27) has an inner face (9; 9'; 34; 51) that is curved away from the observer (7).
